SKILLS

Full Stack – Party in the Front, Business in the Back!

Designer 1st – I firmly believe any developer should first be a designer, and vise-versa, so that they know the foundation of aesthetics, design principles, and take this carnal knowledge first and foremost into the lifecycle of a development project.

Strategy–Minded – I think outside the box, take risks, and make informed decisions about resource allocation. My vision will align with your goals. Through the risks we take we will see great rewards. We are creative, we don't accept the status quo. Because I am a voracious learner and adaptable, I am ready for change. I step back from the details and look at the situation from a high-level to give the most adept considerations for success

LANGUAGES

Javascript, HTML, CSS

PHP, MySql, Python, Django, postgreSQL

.git, terminal, CLI

*.js Frameworks – React, Vue, Angular

CMS – Wordpress, Wagtail, AEM, EDS
